Application No. 09/835,465 Attorney's Docket No. 031211-059 Page 2

of such an apparatus profile can be read up on, for example, in the ICC specification "Spec ICC.: 1998 - 09", hereby incorporated by reference in its entirety.--

BI

Kindly replace the paragraph beginning at page 1, line 30, with the following:

--The use of these measured parameters for transmitting the measured data of individual colors (spot colors) or of color tables or atlases is described in detail, for example, in the ANSI standard IT8.7/2-1993 (graphic technology-color reflection target for input scanner calibration), hereby incorporated by reference in its entirety. Especially one possibility is illustrated therein of how different colorimetric or spectral measured data from individual color fields can be packaged into a file format.--

Kindly replace the paragraph beginning at page 2, line 10, with the following:

--Human color perception, however, is not only influenced by the measured values of the color itself, but also by influences of the surrounding fields, for example, the absolute brightness of the color, the neighboring colors, and so on. In the CIE publication CIE 131-1998 (The CIE 1997 interim color appearance model (simple version) CIECAM 97s), hereby incorporated by reference in its entirety, and other publications, mathematical models of how some of these effects can be mathematically modeled are defined.--

Kindly delete the paragraph beginning at page 6, line 4.

Application No. 09/835,465 Attorney's Docket No. 031211-059 Page 3

Kindly replace the paragraph beginning at page 6, line 10, with the following:

--Other objects and advantages of the present invention will become more apparent from the following detailed description of preferred embodiments, when read in conjunction with the accompanying drawings wherein like elements have been represented by like reference numerals and wherein:

B3

- Fig. 1 shows the principle schematic drawing of the process in accordance with invention for producing a color information data file;
- Fig. 2 shows a graphic representation of a data exchange format as used in the process in accordance with the invention; and
- Fig. 3 shows a principle schematic diagram of the color communication process in accordance with invention.--

Kindly replace the paragraph beginning at page 7, line 24, with the following:

--The hierarchically organized object structure of the data objects is formed on the basis of a page description language, especially the Extensible Markup Language (XML). This allows a universal, largely platform independent and language independent data exchange format. Details to XML are extensively documented in, for example, the Addison Wesley publication "XML" in the practice; professional Web publishing with the extensible markup language", hereby incorporated by reference in its entirety.--

Application No. 09/835,465 Attorney's Docket No. 031211-059 Page 4

After the paragraph beginning on page 17, line 25, kindly insert the following new paragraph:

--It will be appreciated by those skilled in the art that the present invention can be embodied in other specific forms without departing from the spirit or essential characteristics thereof. The presently disclosed embodiments are therefore considered in all respects to be illustrative and not restrictive. The scope of the invention is indicated by the appended claims rather than the foregoing description and all changes that come within the meaning and range and equivalence thereof are intended to be embraced therein.--

IN THE CLAIMS:

Please amend claims 1-10, 12, 16-31, and 35-38 as follows:

1. (Amended) Process for producing an electronic color information file for color communication, wherein the file includes at least one data set describing the color impression of at least one color sample, comprising the steps of:

making available the at least one data set in a processor; and

storing the at least one data set in a preselected data format in the color information file, such that all the information data associated with the at least one color sample and at least one of identifying, characterizing, and supplementing the at least one color sample are stored as information data containing data objects in an open, expandable, hierarchically organized object structure in the color information file.
